1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

- 2. Claims 1, 4, 6,8-9 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Evans, U.S. Patent No. 3,485,706 substantially as set forth in the prior office action. With regard to the limitation "laundering said formed patterned and imaged nonwoven fabric to cause slippage between the fibers of the fabric", Evans discloses each and every manipulative step claimed. Therefore, it is reasonable to presume that performing the same process steps would result in the same product and it is further reasonable to presume that the same process steps which are performed on the same material, a nonwoven web, would function in the same way, i.e., since Evans teaches providing the precursor web, hydroentangling it on a image transfer device in order to pattern and image it and then discloses laundering, it is reasonable to presume that the laundering step of Evans is going to do the same thing as the laundering step in the claimed invention.
- 3. Applicant's arguments filed 4/21/04 have been fully considered but they are not persuasive. Applicant argues that a clear distinction from Evans is that Applicant's method subjects the hydroentangled fabric to laundering to thereby cause slippage between the fibers of the fabric and to take on a stressed or wrinkled appearance by virtue of the slippage between the fibers of the fabric, while in Evans the laundering steps is merely incidental to ordinary use rather than an integral aspect of the formation process. However, this argument is not persuasive because Evans does disclose all of the claimed process steps. No specifics are given in the claims which would distinguish any of the claimed steps from the process disclosed by Evans. For example, no temperatures, pressures, times, etc, are supplied regarding the water jets and the

Art Unit: 1771

hydroentangling process, no specifics are supplied regarding the laundering step which would distinguish it from the laundering step in Evans, such as water temperatures, length of treatment, degree of agitation, whether or not detergents or other treating agents are used, etc. Therefore, whether the laundering is done as a specific step of a claimed process, or as incidental laundering, the fact that Evans discloses laundering means that it teaches all the claimed steps and there is nothing on the record to rebut the presumption that since all the process steps are the same and the starting materials are the same that the process steps would have the same effect in Evans as they would in the claimed process. Therefore, the rejection is maintained.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Elizabeth M. Cole whose telephone number is (571) 272-1475. The examiner may be reached between 6:30 AM and 6:00 PM Monday through Wednesday, and 6:30 AM and 2 PM on Thursday.

Mr. Terrel Morris, the examiner's supervisor, may be reached at (571) 272-1478.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

The fax number for all official faxes is (703) 872-9306.
